PRODUCT DESCRIPTION

Thanks to their design and the technologies used, the panels of the CS6W-MS series achieve higher performance. Lower operating temperature ensures better energy yield. These panels use dual cell technology, which means the cells are half the width, reducing energy loss. They are divided transversely, so that the two halves work independently. Even if one half is shaded, the other still works, increasing partial shading tolerance.

Weight – 28 kg.

This product cannot be purchased separately!
